PACIFIC AIR CONTROL

Quality Assured

» WHO WE ARE

Pacific Air Control, Inc. was founded in 1977. With over thirty years in the Heating, Ventilation, and Air Conditioning industry, PAC's owner recognized the need for a high quality, dependable, and value oriented service and construction company with a strong focus on building long-term partnerships within the Commercial HVAC Industry. At Pacific Air Control, we have the expertise to work on most types of commercial HVAC and control systems and our technicians receive rigorous ongoing training to stay ahead of the technological advances within the industry. Our technicians are also trained on older equipment to service our customers that own or manage renovated historical office buildings with older HVAC systems. By maintaining a wide variety of office buildings, financial institutions, medical facilities, government institutions, telecommunications cellular sites and computer rooms, Pacific Air Control has decades of combined experience to offer our clients.

As one of the premier commercial HVAC contractors in the Pacific Northwest, we combine our collective experience, technical expertise and our industry's best practices to provide the best value to our customers. We take pride in the reliability and technical excellence of our services. Our technicians use the latest technology to receive communications from our dispatchers and our building controls experts carry laptop computers and can interface with automated control systems to ensure they are prepared for any situation. Pacific Air Control, Inc. has the depth and the people to respond to any situation promptly, 24 hours a day, seven days a week.

» **"Your men arrived, quickly evaluated the situation and made a quick decision to directly pipe cooling air into the intake of each of our Cisco Servers. Not only did this vastly improve our situation, but it also managed to look like it was engineered as an OEM field repair. Pleasantly surprised, we all admired the work. Our hats are off to your company for helping with a rather creative solution."**

~ Nick Walsh, Corporate Engineering, T-Mobile
